IMPORTANT ROOT CANAL STATS PATIENTS NEED TO KNOW

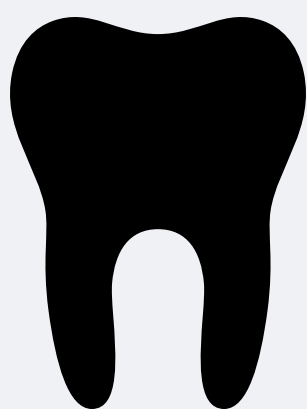

15%

This is the percentage of people in the U.S. who avoid seeking critical dental procedures like root canals every year due to misconceptions about endodontic therapy.

15 MILLION

The number of root canal procedures performed in the U.S. annually. Root canal therapy is the most common of endodontic procedures.

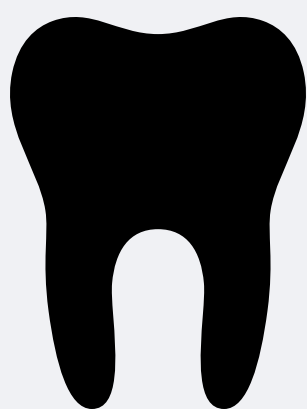

41,000

This is how many root canal procedures are performed every day in the U.S., relieving patients from tooth pain and decreasing their risk of dental complications.

97%

The percentage of root canals that are successful. If done well, a root canal along with an appropriate tooth filling or dental crown can last many years. 85 percent of root canals can even last a lifetime.

10.9 MILLION

The number of root canals that are performed by skilled general dentists each year. 72 percent of dental patients trust their dentists to carry out this common, effective dental procedure.
